ABOUT ME

My core skills are focused on AI implementations through Machine Learning, Deep Learning, RAG systems and AI Agents. I am focused on innovation and continuous learning in order to develop my best version as a future AI Engineer and to become an important reference in the sector.

EDUCATION

Master's Degree in Artificial Intelligence, UAX *10/2026 – 07/2027*

Deep Learning, generative AI, classification, clustering, and evaluation techniques, Natural Language Processing (NLP), enterprise AI, mathematics and statistics applied to AI.

Double Degree in Mathematical and Computer Engineering, UAX *09/2021 – 07/2026*

Artificial Intelligence, Machine Learning and Deep Learning, covering the design, training and evaluation of predictive models with PyTorch, Keras and Scikit-learn. Strong foundation in Python programming, data structures, algorithms, statistics and large-scale data analysis. Applied Natural Language Processing (NLP) and Large Language Models (LLM) to build Retrieval-Augmented Generation (RAG) systems and AI agents.

Web Development Bootcamp, Ironhack *10/2023 – 12/2023*

Intensive full-stack development program covering HTML, CSS and JavaScript, with hands-on practice in Git version control, REST APIs and agile/Scrum methodology.

Data Analytics Bootcamp, Ironhack *10/2022 – 12/2022*

Practical training in data analysis and visualization using Python, Pandas and Scikit-Learn, including data cleaning, statistical analysis and dashboard creation for data-driven decision making.

C1 Advanced English (CAE), Cambridge Assessment English *2021*

EXPERIENCE

Software Development Intern, Accenture *01/2026 – 07/2026*

Designed, developed and maintained Java backend applications with the Spring Boot framework, following object-oriented programming and software design best practices. Managed build and dependency processes with Maven, collaborated using GIT version control, and worked with MySQL relational databases in an agile, team-based environment.

Cybersecurity Intern, EY (Ernst & Young) *01/2025 – 07/2025*

Risk assessment support, vulnerability analysis and security review tasks as part of client engagements, gaining hands-on exposure to information security frameworks and best practices.

PROJECTS

RAG-Agent AI Tool

Built an end-to-end Retrieval-Augmented Generation (RAG) system in Python, combining dense and sparse (BM25) retrieval fused via Reciprocal Rank Fusion (RRF) over a HuggingFace sentence-transformers embedded ChromaDB vectorstore, orchestrated by a LangGraph-based AI agent that autonomously decides between retrieving user documents or searching the web (Tavily) through a ReAct reasoning-and-tool-use loop, and served via a production-style FastAPI backend with session

management, authentication and persistent chat history.

Real-Time Intrusion Detection System (IDS)

This is the core of my Bachelor’s Thesis, developing a real-time Intrusion Detection System combining unsupervised and supervised Machine Learning: an undercomplete Autoencoder trained on benign traffic to flag anomalies via reconstruction error (MSE), and a Random Forest classifier to categorize threats (DoS, brute force, SQL injection), trained and validated on the CICIDS2017 dataset with correlation-based feature engineering, deployed on a LAMP architecture with real-time network flow extraction (NFStream) and penetration-testing validation using SQLMap and Hydra.

SKILLS

Artificial Intelligence	Machine Learning, Deep Learning, LLM, RAG, AI Agents
Programming	Python, Backend(FastAPI, Django) HTML, CSS, React, JS
Databases	MySQL, MongoDB
Tools	Jira, GIT, GitHub, Linux Environments
Other	Cybersecurity
